- ▶ Female patients - improves libido, sexual arousal disorder and enhances blood flow, and a 70% more orgasmic experience during sexual activity
- ▶ No cortisol/ACTH increase or prolactin spikes
- ▶ No appetite stimulation reported
- ▶ No rash or allergic reactions reported

## Helps both men and women boost libido and improve overall sex life.

**Bremelanotide PT-141** is a peptide used as a treatment for sexual dysfunction in both men and women. In other words, if you are looking to boost your libido and improve your overall sex life, this peptide can help you enormously.

### What is Bremelanotide PT-141\*

Known as a melanocyte stimulating hormone (MSH), bremelanotide was actually originally created to stimulate the tanning of skin. After several clinical trials, it was discovered that it worked effectively as a remedy for sexual arousal issues like erectile dysfunction in men and low libido levels in women. Results from research studies has shown Bremelanotide PT-141 does not act on the vascular system like other compounds, but works by activating the melanocortin receptors in the brain. It's through this reaction that increases sexual stimulation, it helps to fire up sexual desire in women and can even induce sudden erections in men.

\*Can cause nausea post dose with only 8-12% of patients and at most will last 25 minutes.
